

YPOSKESI'S NEW BIOMANUFACTURING SITE IN NUMBERS

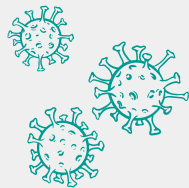

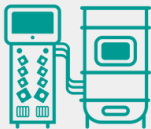

After two years, the construction is now completed. The building and its equipment are in the process of qualification. It will be operational in 2024.

2024

X2 Double our production capacity

Triple our bioreactor capacity **X3**

5,000 m²
(54,000 sq ft)

6 USP (Upstream Process) rooms

2 DSP (Downstream Process) rooms

Compliant with both
American and European
cGMP guidelines

Total with the two
buildings is up to 75
batches per year

Creation of around
90 jobs

Innovative greener solutions to optimize the energy performance of the building and the manufacturing process to become a player in the energy transition

The final goal is to improve the patient outcome. With the new facility, our customers will have better access to viral vectors, hence facilitating and accelerating cell and gene therapies on the market.

From early process development to commercial batches
